Measure Square Launches First UK ERP Integration with Carman, Streamlining Flooring Data Workflows

Pasadena, CA — Measure Square has launched its first UK-based ERP integration, connecting its takeoff and estimating software with Carman, the ERP developed by Computers for Flooring. The integration enables flooring professionals to exchange data seamlessly between Carman and Measure Square, reducing manual data handling across takeoff, estimating, and project management workflows.

The integration allows users to import existing Carman product catalogs directly into MeasureSquare 8, eliminating rigid templates and time-consuming data reformatting. Completed estimates can then be exported back into Carman, supporting downstream processes such as scheduling, invoicing, and purchasing.

“This integration is about removing roadblocks,” said Jim Riherd, VP of Operations at Measure Square. “By allowing flexible data mapping from third-party software, we’re giving flooring businesses the power to work with their own data, their own way.”

Carman, a cloud-based ERP platform built for the flooring industry, centralizes operations from customer orders through final installation with tools for estimating, inventory, scheduling, invoicing, and more. This integration signals Measure Square’s focus on strategic ERP partnerships, enabling flooring businesses to eliminate data silos, standardize workflows, and expand into new markets with confidence.

Sign Up for Early Access

Carman customers can request early access to the integration by contacting Measure Square and can see it in action during a live demo at The Flooring Show in Harrogate, September 2025.
