

What's new with

MeasureSquare Stone & Tile

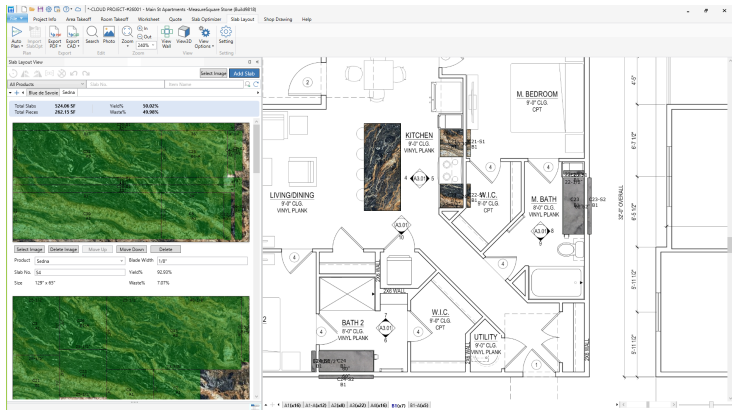

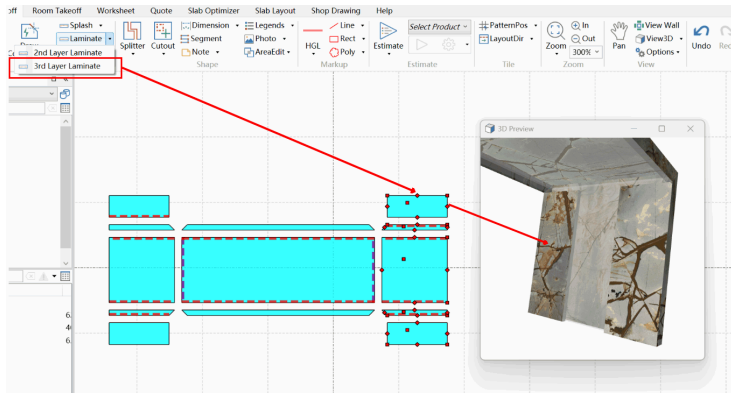

Slab Layout, Batch Moving, Pre-Sized Splash/Lam, Shareable 3D View Links, And More.

[Watch Updates Video](#)

Use Auto Takeoff to Take Off Floor Plans Instantly.

Import DXF files from on-site templating devices and automatically generate enclosed areas: no manual tracing required. Go straight from the field to takeoff, cut out extra steps, and now **automatically extract labels** for faster, more accurate estimates.

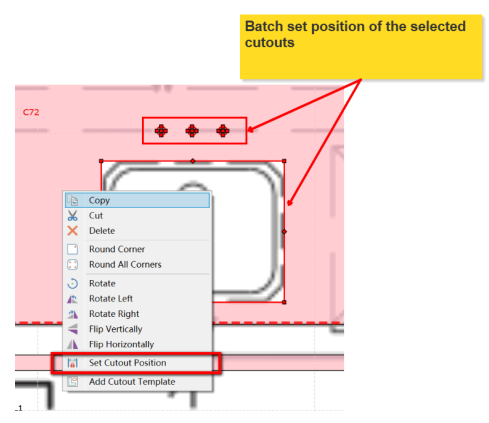

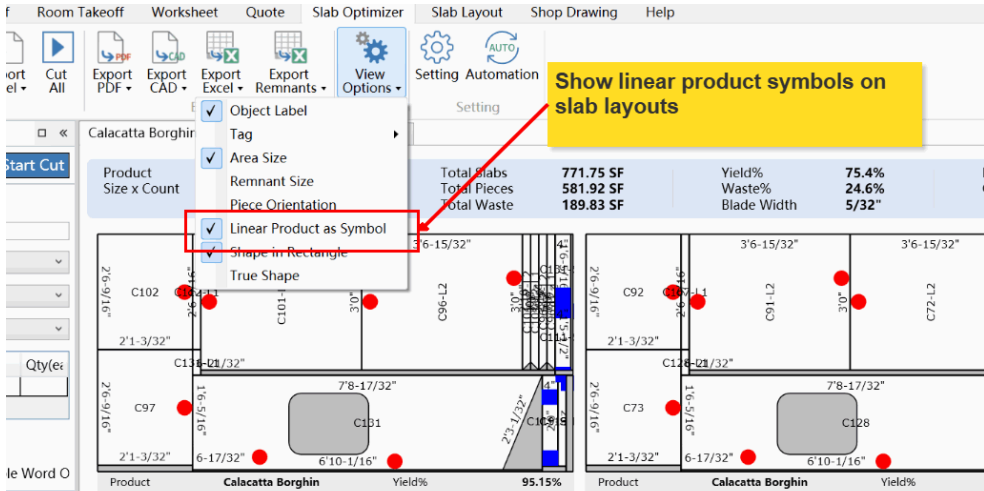

Create 3rd-Layer Splashes & Laminates

With third-layer laminate and splash support, create meaningful 3D modules more easily and reduce downstream edits.

Slab Layout (previously Dry Lay)

Group and pull in pieces directly into slab layout—no need to go through Slab Optimizer.

Slab Optimizer Enhancement

Slab Optimizer now displays linear product symbols in layouts and PDFs, making it easier for factories to plan cuts and edge finishes accurately.

Batch Moving Cutouts

Due to high demand, we've made it possible to batch-select holes and reposition them together for faster adjustments and more consistent cutout placement.

Pre-Defined Splash/Laminate

Default splash and lam values are now built in, making it faster to create accurate, pre-sized pieces, especially for jobs where speed and consistency matter.

Share Stone Projects with a Simple 3D Link

Shareable 3D viewer links let customers see their projects rendered with updated finishes, helping sales teams present designs more confidently.

UPCOMING FEATURE

- **Directly Import Field Measurements** from Templating tools like LPI (Laser Products Industries aka LT3 Raptor) and Prodim (Prodim).
- **The Impact:** Allows users to create slab layouts with real world dimensions for the most accurate layouts possible.
